

Basement WALL Systems

ZenWall™ Paneling System

BrightWall® Paneling System

Best looking! Most durable
Use before finishing Most economical

ThermalDry® Wall System

CleanSpace® Wall System

You don't have to put up with dark, ugly, damp basement walls anymore. Basement Systems has four options - ...one that's right for your needs!

ZENWall™

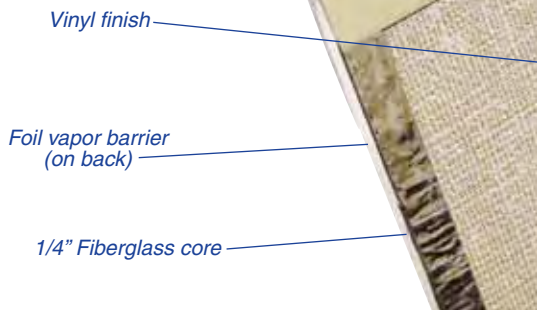

BASEMENT PANELING SYSTEM

Now there is a way to make your basement walls look dry, and get a clean finished look in one easy step: the revolutionary ZenWall™ Basement Paneling System.

ZenWall™ insulates, is washable and is our best looking wall system – you'll love it!

The finish on ZenWall™ looks great – about as great as you can get without doing a full basement finishing project, for a fraction of the price. It makes a huge difference in what your basement looks like and what you feel like when you are in your basement!

BrightWall

PANELING SYSTEM

The BrightWall® Paneling System is 4' x 8' sheets of plastic paneling attached to the walls with special drilled-in fasteners that will never come off of the wall. BrightWall® provides a clean, bright, semi-finished look to your basement walls while stopping water vapor from permeating your walls and draining any leaks down to a water management system. It looks great and is the most durable of the four wall system options.

ThermalDry® Wall System is the preferred option for your basement walls if you are going to finish your basement in the future with studs and drywall.

ThermalDry WALL System

*Use Before
Conventional
Finishing!*

The ThermalDry® Basement Wall System stops water vapor, drains wall leaks, and does something the other three systems cannot do – it reflects up to 97% of the indoor heat back into the basement. This saves energy and money because your heat is not absorbed and lost into the perpetually cold basement walls.

When finishing your basement, leave a ½" space in front of the ThermalDry® for maximum benefit. Ask about our other finishing products.

The CleanSpace® Wall System is a 20-mil thick reinforced plastic liner that is installed with permanent drilled-in fasteners. It is a fast, economical way to cover ugly walls, stop water vapor from permeating the walls, and drain wall leaks. The white color really brightens a basement, reflecting available lighting.

CleanSpace® Wall System

Most Economical!

slow and stop water vapor from coming through the walls.

Wall Systems Selection Guide

Which is for you?

BEFORE

Unfinished concrete walls are cold, damp, and uninviting.

ZenWall™ Paneling

ZenWall provides that dry, clean, finished look while insulating and waterproofing your walls. This is the best looking solution!

BrightWall® Paneling

BrightWall® Paneling brightens your basement and gives it that clean, semi-finished touch.

ThermalDry® Wall System

Using the ThermalDry® Wall System to cover your basement walls helps to insulate your home, reflecting over 90% of the heat back in. Use when you plan to conventionally finish your basement.

CleanSpace® Wall System

Covering your basement walls with the CleanSpace® Wall System economically brightens your basement. Use over stone walls... or the economy version for any basement.

All 4 systems drain wall leaks to a drainage system below and stop water vapor from coming through the walls.

While any of the four wall systems are appropriate in dry basements, if there is ground water seepage, before or after the installation, our WaterGuard or DryTrak systems should be installed to control the water. Ask your local dealer for details.
